

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

of the tube, this gas, having no other vent, is carried into the bellows, which are kept open on purpose.

When it is supposed that the bellows are full, or nearly so, they are closed; and it being impossible for the gas to return, the valve being shut, it is compelled to enter the mouth and lungs of the patient. This process, which is several times repeated, without neglecting other known remedies, forms the essential part of the very simple method which I propose.

I have had the satisfaction of saving with this apparatus a man drowned on the sea coast, who in a very little time was restored to life.

#### *Improvement in the management of the Dairy.*

Sir John Sinclair, in his "Account of the systems of husbandry adopted in the more improved districts of Scotland," relates that the most important improvement

that has recently taken place in regard to the management of the dairy, is the invention of cast iron milk dishes, by Mr. Braid of the Shots iron works, near Whitburn in West Lothian. These dishes are made of cast iron softened by annealing in charcoal, turned smooth inside, then laid over with a cover of tin, to prevent the iron coming in contact with the milk, the rust of which might injure it. The outside of the dish is painted over to prevent rust also. The advantages of these dishes are that they preserve that proper degree of coolness which is necessary to cause the milk to throw up the cream, that they are easily kept clean by a little chalk on a woollen rag, and that they may be re-tinned at a small expence. But it is proper to remark here that these iron dishes, so greatly recommended by the president of the board of agriculture, are compared only with wooden dishes, and not with the earthen-ware pans.

### DOCUMENTS RELATING TO PUBLIC AFFAIRS.

#### COMPARATIVE STATE OF THE REVENUE AND FINANCES OF GREAT BRITAIN, FROM THE YEAR 1701 TO THE YEAR 1814.

(From *Phillips' Monthly Magazine*.)

As the condition and power of a country are measured by the state of its finances, every Briton is deeply interested in the following facts which have been abstracted from official documents, and

BELFAST MAG. NO. LXXV.

arranged for the first time in an intelligible form for the information of the readers of the *Monthly Magazine*. An endeavour has been made to express every thing separately and clearly, so that these usually-involved accounts may be comprehended by the plainest capacity, and persons of least experience in arithmetical statements.

*Money raised by Taxes and Loans.*

In 1701 the monies voted for by
